

PDF Test Report

Overview

This document is a deterministic fixture used to validate the PDF parser. It exercises section headings, body paragraphs, and ruled tables.

It also exercises running headers and footers which should be filtered out of the body blocks by the parser heuristic.

Methods

The parser extracts font sizes per span and infers heading levels by comparing against the dominant body font size.

Results

Metric	Before	After
Precision	0.72	0.91
Recall	0.65	0.88

The precision and recall numbers above demonstrate the improvement delivered by the second iteration of the system.
